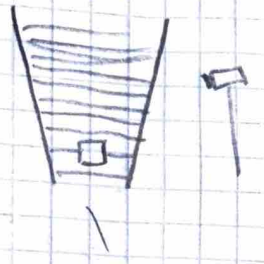
# V.01 Rail Unit

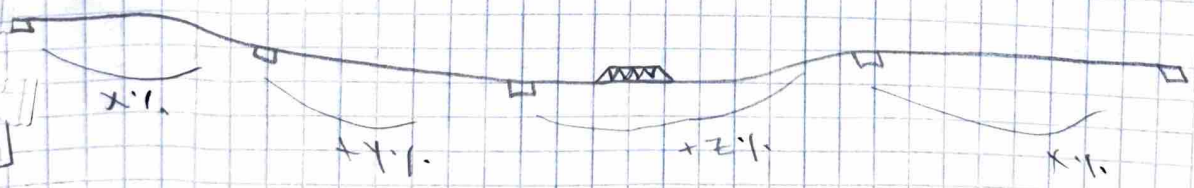
Observations: ☆ Not as valuable
Easier to start, test, develop & get data



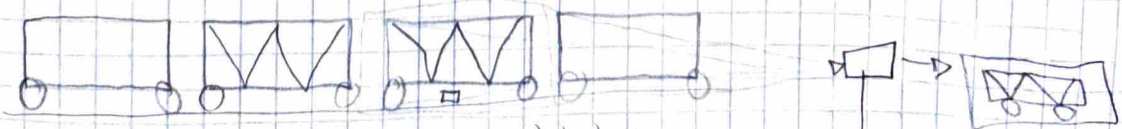
Problems:
- needs to be robust
- less useful
- Com to engineer?
- Legal?

gets car data
to associate data per car

CV to see dragging/sparks
thermo sensors
vibration
~~vid~~ audio



☆ Lots of data



nominal for car type

"

Anormal for car type
OFF X Y Z
Confidence: %
Wait for Station or Next

car TYPE:
Oil
Speed:
23

# V.01 ON CAR UNIT

**DATA**

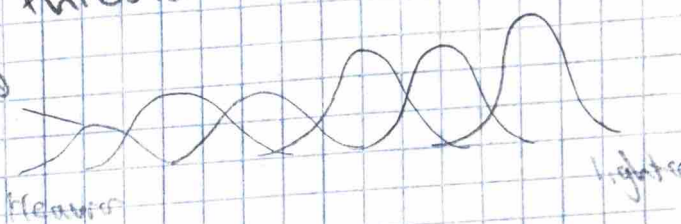
Train models

UNIT

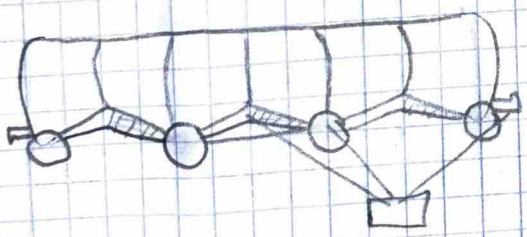
Vibration
Heat
Bumps
GPS

develope thresholds

Beyond threshold
- Alert



Depends on:
- Car + tire
- weight → guess/learned constant
get scale data



Problems:
- load weight
- Network between units
- Configurations of cars is not static
- Communicate to Engineer
- battery? Solar?
- Where to put unit
- unit/unit(s)?
- Inter unit com?

Battery
Sensors
com

?

Observations
- W/O unit on every car network is difficult/impossible
- Pivot to on track stationary?
- Units better for high risk cars
- Dector is biggest issue
- More sensible to start w/ stationary sensor
  - Computer vision?
  - Thermometer?
  - Vibration
